Fingerprint bicycle lock

Your finger is the key

-    360° fingerprint recognition
-    Supports 20 fingerprints
-    Additional connections and
     APPs are not necessary

ZR 307
Fingerprint bicycle lock

120 x 370 mm

Operating manual

The fingerprint bicycle lock is charged via a micro USB power cable*. Please charge it fully before using it for the first time.
A total of 20 fingerprints are supported: Numbers 1 & 2 are master fingerprints, the following numbers 3-20 are normal user fingerprints.
• The lock will be reset to the factory default mode and all fingerprints will be deleted as soon as one of the master fingerprints has been deleted.
• The lock can be unlocked by ANY fingerprint when it is in factory default mode.
• *Not contained in the scope of delivery*

| LED indicator light - general display	
Red light flashes ➔	Low battery charge
Red light is on continuously ➔	Please charge
Light off ➔	Fully charged
Indicator light in memory mode	
Green light flashes ➔	Registration mode / open
Green light is on continuously ➔	A fingerprint is saved successfully
Blue light is on continuously ➔	Master fingerprint is authorised
Blue light flashes ➔	Open (factory default mode)
Red light is on continuously ➔	Deletion mode for fingerprints
Red light flashes ➔	Saving of a fingerprint failed

Registration of the first master fingerprint:

1. Open the lock (with any fingerprint). Press and hold the fingerprint sensor with one of your fingers for 8 seconds until the blue light is on continuously.

2. Then touch the sensor with the finger whose details need be stored - the green light flashes

3. Touch the sensor 4 times with different areas of the same finger.

4.1 Saving failed - red light flashes

4.2 Saving successful - green light flashes

5. After executing the saving process five times, the first registration of the master fingerprint is successful (two master fingerprints are supported).
Registration of new fingerprints:

1. A master fingerprint is required for the registration of new fingerprints

2. Press and hold the sensor with your master fingerprint for 5 seconds until the blue light is on continuously
3. Touch the sensor with the finger whose details need be stored - the green light flashes

4. Touch the sensor 4 times with different areas of this finger

5.1 Saving failed - red light flashes

5.2 Saving successful - green light flashes

5. After executing the saving process five times, the registration of the user fingerprint is successful

Deleting all fingerprints & resetting to factory default mode

1. A master fingerprint is required to delete the fingerprints

2. Press and hold the sensor with your master fingerprint for 8 seconds until the red light is on continuously

3. Touch the sensor with the same master fingerprint - the green light is on continuously

4. All fingerprints are deleted and the lock is reset to factory default mode
